The visualtoks Package, version 1.0a

plante

June 21, 2025

In The TEXbook, Knuth demonstrates the concept of tokens with the following example:

For example, if the normal conventions of plain TEX are in force, the text '{\hskip 36 pt}' is converted into a list of eight tokens:

$$\{_1 \mid hskip \mid 3_{12} \quad 6_{12} \quad {}_{\sqcup 10} \quad p_{11} \quad t_{11} \quad \}_2$$

The subscripts here are the category codes, as listed earlier: 1 for "beginning of group," 12 for "other character," and so on. The hskip doesn't get a subscript, because it represents a control sequence token instead of a character token. Notice that the space after hskip does not get into the token list, because it follows a control word.

(p. 38)

The same style of token display is used several times in the TEXbook. It would be useful to be able to generate the display automatically for an arbitrary list of tokens, for pedagogical or debugging purposes. This package provides the \visualtoks command which does exactly that.

Usage

Usage: $\forall isualtoks \{ \langle token \ list \rangle \}.$

This package may be used in plain TeX or LaTeX by \input{visualtoks}. The ε -TeX extensions are required for the \detokenize primitive.

The horizontal separation between displayed tokens may be configured by the dimen register \visualtokskip. The default value is 1em.

⟨token list⟩ must be balanced with respect to explicit braces, and must not contain the token \visualtoks@cycle@nil. It is assumed that { and } are the only characters with category codes 1 (beginning of group) and 2 (end of group) respectively.

Samples

• \visualtoks{\def \macro {abc #1\egroup}} gives

• \visualtoks{\$\$\halign{&##\hfil\crcr}\$\$\par} gives

```
\$_3 \$_3 halign \{_1 &<sub>4</sub> \#_6 \#_6 hfil crcr \}_2 \$_3 \$_3 par.
```

• Unbalanced \if... tokens:

\visualtoks{\ifnum\iffalse{\fi'} = 0\else} gives

 To demonstrate how TEX tokenizes consecutive spaces: \makeatletter \edef\temp{{\ullingle} \Qspaces}} \expandafter\visualtoks\expandafter{\temp} gives

$$\{1 \sqcup 10 \}_2 \{1 \sqcup 10 \sqcup 10 \sqcup 10 \sqcup 10 \}_2.$$

• To demonstrate the \lowercase technique:

\begingroup

```
\lccode'&='$ \lccode'#='$ \lccode'^='$ \lccode'_='$ \lccode'='$ \lccode'='$ \lccode'='$ \lccode'='$ \lowercase{\endgroup\def\temp{$&##^_\_A?^}} \expandafter\demotokens\expandafter{\temp} gives
```
